

## Shane & Jodie Foster

BOONAROO ANGUS, CORNDALE, VIC

In 2022 at Boonaroo Angus we'll join 650 cows.

For over a decade now, we've been vaccinating all females and bulls with Pestigard. It has become an integral management practice within our herd.

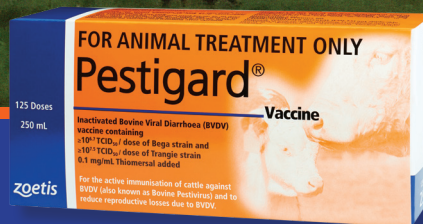

For us, vaccinating with Pestigard ensures that every calf conceived has the best possible chance of making it through its entire gestation and being born fit and healthy.

All bulls are vaccinated further reduce any risk for spread of the disease and to enhance the quality assurance of those bulls going out into our client's herds.

We vaccinate as a service to our bull clients and to prevent the risks pestivirus infection poses in our own herd.

From our own interactions with our client base, pestivirus is most definitely prevalent in the industry and Pestigard provides the simplest and best means of minimising its impact on our herds.

**"Vaccinating with Pestigard ensures that every calf conceived has the best possible chance of making it through its entire gestation and being born fit and healthy".**

Always on guard
